

Dear Reader,

The assembly and guidance manual, together with these Appendices, are provided freely and on a non-commercial basis to help individuals or institutions explore a fascinating aspect of electrochemical systems in pursuit of a better understanding of our world.

While practical work and experimentation naturally involves financial aspects, the information and effort presented in this work falls outside of those considerations. As an independent researcher, this is partly to remove any suggestion of financial bias regarding the findings and also on the basis of open access to all of information that may be of collective help in these times of great change and need.

As such, if any evidence arises that this material, or part thereof, is being distributed for monetary gain, please let me know via jp@kerrowenergetics.org.uk

Thank you,

Julian Perry
